What was once a relatively simple plant, cannabis (marijuana) has inspired everything from fear to fierce loyalty. We'll have a conversation about the science of today's marijuana and its impact on young people's developing brains.

We need to learn all we can about this evolving substance, which bears little resemblance to a plant.

Our presenters will address the effects of increased THC levels, social norms, availability, and the impact on a young, developing brain.

Patrick Dowling is a Licensed Professional Counselor with a Master's Degree in Clinical Counseling/Marriage and Family Therapy. Patrick has trained and worked as an advanced addictions counselor for over twenty years, clinical supervisor, clinical director, administrator, and as a human being. He utilizes various models of therapy including family systems, motivational interviewing, dialectical behavioral therapy, cognitive behavioral therapy, MBSR (mindfulness based stress reduction), trauma treatment, and relapse prevention. Patrick has been especially known for his successful assistance with families in complex interventions.
